SOLUTIONS

GLOBAL CAPABILITY · LOCAL EXPERTISE

Determine the level of cybersecurity risk your company is exposed to

Most companies today are well aware of the increasing threat of cybercrime and understand the need to secure their data, web-based assets and vital corporate information from theft, malware and interference. But to what extent is your company vulnerable? According to the Centre for Internet Security* (CIS) there are 20 key controls that can reduce your cybersecurity risk by 94%*. But prioritizing security vulnerabilities is getting more difficult and more complex.

Vulnerability Assessment is one important step in the right direction.

Uncover vulnerabilities and gain visibility with our expertise

Identifying and closing the exposure gaps in your cybersecurity is critical to protect any business from harmful attacks. But with the increasing number and sophistication of attacks, this is becoming increasingly difficult. At HKT, we take this burden off your shoulders by providing knowledge, visibility, insights, and risk levels to help you better understand threats to your environment and respond accordingly.

Discovering Assets and Exposures

Identify known security exposures with our vulnerability assessment service, and discover assets in your network before attackers find them.

Visibility to Vulnerability

Assessing your vulnerability so you can plan ahead before an attack and check whether your mitigation efforts have been effective over time.

Prioritize Remediation

Gain actionable information on the severity levels of your vulnerabilities, so you can address the most critical exposures swiftly.

Greater Insights for Better Decisions

Gain clearer insights, so you can make better decisions and justify your cybersecurity investments.

Beat the attackers

Visualize any vulnerabilities to close any cyber exposure gaps swiftly.
