

HKT CloudView

MONITOR YOUR SYSTEM INTELLIGENTLY IN A MULTI-CLOUD ENVIRONMENT

Visualize All Your Applications And Resources At Once

CloudView is a unified multi-cloud monitoring tool that visualizes all your cloud applications and resources across dynamic and distributed infrastructures on a single platform to give the end user a better digital experience.

INSIGHTS BASED ON REAL USER EXPERIENCE

CloudView provides the real-time status of your workloads and business applications from perspective of end user experience. It provides pre-emptive alerts to address performance issues before they affect system availability, and identifies bottlenecks to optimize the user experience.

VISUALIZE YOUR CLOUDS WITH INTELLIGENCE

CloudView provides a holistic overview of all your cloud activities, from network, to servers, and applications. It will check the health of your total system with a combination of monitoring approaches to meet your specific requirements. It also offers rapid troubleshooting with automated problem diagnosis, providing immediate and actionable insights to optimize performance.

MULTI-CLOUD, SINGLE PORTAL

As a single portal with a customizable performance dashboard, CloudView lets you monitor all your on-premises, multiple public and private cloud activities, and most important performance metrics as you see fit. It simplifies your IT management, and enables you to enjoy the benefits of multi-cloud strategy, by keeping your options open, to increase flexibility.

YOUR TRUSTED CLOUD PARTNER

We assist you at every stage of your cloud journey with continuous support throughout your planning, implementation and optimization.
